Visualisation of magnetic field lines of the Earth

Model: Tsyganenko 87 version exshor ikp=4 (kp= 2+) Date/Time: 16 janvier 2001 02:00 Cordinates: GSM

P. Robert, CETP/CNRS, 1996

Illustration : Visualization of magnetic field lines of the Earth, showing the magnetosphere.

The magnetic Earth's field lines, due to the internal field, initially dipolar and symmetric around the axis of the magnetic dipole, are deformed by the solar wind, which create a closed cavity, named magnetosphere, and a chock wave upstream of this cavity. The various regions are artificially colored. The color choice, here as well as from one season to another for the calendar, is purely esthetical.

The magnetic field model used is the one of *Tsyganenko 1987*. The computation of the magnetosphere geometries, from the magnetic field model, is done from a specific library developped at CETP, the "*Comagnetolib*". All the graphical is produced by an owner library, the "*Rogralib*".

Calendar:

The sunrise and sunset time, the computation of the maximal elevation of the Sun at the local noon, the duration of the day, are computed thanks to a coordinate system library, developed initially for the CLUSTER mission in 1992, the "*Rocotlib*", completed by all the routines allowing calendar and time conversions.

The accuracy is around one minute. Computations are done assuming a spherical Earth, and for a constant value of the indices of refraction of the air, at the horizon, as well as a constant apparent diameter of the SUN. Computations have been checked with the ephemerid values delivered by the "Bureau Des Longitudes" in Paris.

This calendar can be automatically produced for any city in the world and for all years between 1901 and 2099.
